Subject: ms submission - MEPS

Dear Dr. Hendrickx Reners

You have been recommended to me as a reviewer for the manuscript (ms)

SJ Taggart, J Mondragon, AG Andrews, JK Nielsen

'Desging implications for high latitude marine protected areas: spatial patterns and movements of two mobile benthic species'

As Editor of Marine Ecology Progress Series (MEPS) I would be very grateful if you could spare the time to critically review this work.

We attempt to engage the best reviewers available. Should you be interested in reviewing additional mss for MEPS in the future, please include a list of Key Words or a short paragraph describing your research interests when you return the review.

Your critical evaluation of the scientific merits of the above ms would be a service to science, important to the authors, and helpful in maintaining the journal's high standard. For your convenience, a confidential evaluation form is enclosed.

Reviewers must disclose potential conflicts of interest.

Should it not be possible for you to complete the review within 3 to 4 weeks, please consider selecting a qualified colleague or a young scientist willing and able to review the ms under your general guidance.

Thank you very much for your assistance!

Yours sincerely,
