Dear Dr. Hendrickx,

Biota Colombiana is a journal specialized on systematics and checklists of species that are found in the continental and marine territories of Colombia. These checklists can have coverage at the neotropical (only if the group is found in Colombia), national, regional or local levels.

At this moment we are considering for publication the article named "CRUSTACEANS (CRUSTACEA: SESILLIA, STOMATOPODA, ISOPODA, AMPHIPODA, DECAPODA) OF MALAGA BAY, VALLE DEL CAUCA (COLOMBIAN PACIFIC)" submitted by John Juan Felipe Lazarus-Agudelo and Jaime R. Cantera-Kintz.

It will be very helpful for us to have one review from you. Please contact us before five days and let us know if you can review the manuscript and if you can't, it would very helpful if you could recommend some colleague to do that.

Many thanks in advance for your interest and collaboration.

Sincerely,

Amalia Díaz
